

Three new products for 2020 from PFC, lunched at LAMMA

Moisture Sensors, Application Systems and Front Loader Saw Heads

**SMART PHONE PRECISION MOISTURE SENSOR:** New App operated moisture sensor for all baler types utilising the precision technology from our flagship automatic applicator systems. For all Large and small square balers, the moisture range is 8-70% with round baler range at 8-60% moisture range. Precision is a marketing leading  $\pm 1\%$ . No more guessing if the crop is fit to bale with live readings updated every second and an average previous bale moisture displayed. Wet bale management can also be added to these systems.

**SEMI-AUTOMATIC ACID AND INOCULANT APPLICATOR:** Rate controlled applicator for all balers, forage wagons and forage harvesters. Application ranges from 10ml per tonne to 3 litres per tonne. Setting the bale weight and time or tonnes per hour throughput of the machine is simple via a dial control. Setting the litres per tonne is also set in the same way. Once the parameters are set the system will apply the fixed rate. The system utilises a reliable gear pump and can be operated via WIFI reducing cables routed to the machine.

**FRONT LOADER MOUNTED HEDGE BUSTER SAW:** working widths from 1.3m-3.8m. mounts directly onto the front loader frame. The hydraulic equipment is 65l/min and 3 services. The additional services can be provided by an electronic valve. The Hedge Buster will cut up to 250mm (10inch) material keeping the material away for the tractor preventing expensive repair bills. Working with a front linkage mounted grab will maximise the systems potential.

Hedge Buster - Fast, Clean, Productive

Cutting 10 Inch Material Just Got Seriously Easy!
